

About this book

The only current, PJSIP-first guide to Asterisk 22 — while the long-reigning reference is six years stale and predates PJSIP entirely.

Asterisk Guide is a hands-on, lab-verified path to building a production IP PBX with Asterisk 22 LTS — the modern, PJSIP-first way. Every example is tested against a reproducible Asterisk 22 lab, and the source and lab are free and open.

Inside:

- PJSIP endpoints, trunks and WebRTC
- the dialplan, IVR and voicemail
- queues and call-center features
- CDR/CEL billing, AMI / AGI / ARI
- realtime (Sorcery), security and TLS
- installation and deployment
